Subject Index

Food Technology, Volume 51, 1997

The issue number appears in parentheses, followed by the page number. (br) indicates book review.

A

acids, food
inhibit microbial growth, (11)87
additives *(see also* **ingredients***)*
reactor design for plant cell culture of food ingredients, (11)62
agriculture
biotech plants: from lab bench to supermarket shelf, (12)37
IPM awarded world food prize, (12)56
analytical methods *(see also* **laboratory***)*
evaluating syrups using extensional viscosity, (1)49
new lab methods explored: IFT Annual Meeting summary, (7)99
measuring yield stress of fluid foods, (2)50
rapid microbial test for milk, (7)129
vane method for measuring yield stress of fluid foods, (2)50
anthocyanins, monoacylated
biosynthesis and stability, (11)69
aseptic processing
biological validation, (10)48
continuous multiphase of foods, (10)43
measuring residence time and modeling the system, (10)44
producing multiphase food product, (10)43
statistical design and analysis, (10)52
validated for foods containing particulates, (8)60
awards *(also see* **IFT Annual Meeting***)*
1996 DuPont honors innovation in food processing and packaging, (1)95
U. of Georgia wins third place for product development "fruity rice pudding cream puffs; chococherries, (1)38

B

back page
cyclospora—still another new foodborne pathogen, (1)120; olestra: the approval process in letter and spirit, (2)104; protecting health and safety of all Americans, (3)132; medical foods: a regultory paradox, (4)136; "green" treaty needs open discussion, (5)200; hepatitis A from strawberries: who's to blame, (6)132; coordinated approach to food safety education is needed, (7)160; establishing tolerable upper limits for nutrient intake, (8)164; food tannins and human health: a double edged sword? (9)124; chilled foods distribution needs improvement, (10)120; USDA's biotech approach needs revision, (11)124; tannins article draws response, (12)168
bacteriology
LAB used to improve safety of minimally processed fruits and vegetables, (9)44
beef
steering a new course for, (10)30
beverages
redefining new age, (8)44
biochemistry
Microbiology and Biochemistry of Cheese and Fermented Milk (br), (12)83
biology
developing a new food wholesomeness science to ensure food safety, (12)62
biotechnology
biosynthesis and stability of monoacylated anthocyanins, (11)69
biotech plants: from lab bench to supermarket shelf, (12)37
challenges and opportunities for metabolite products from plant cell and tissue culture, (11)47
how *Food Technology* covered over the years, (4)68
identifying bioengineered foods, (11)88
media just can't get enough about, (9)97
meets city politics, (1)23
molecular strategies to improve protein quality of legumes, (5)67
plant tissue culture for producing of secondary metabolite, (11)56
reactor design for plant cell culture of food ingredients and additives, (11)62

safety and regulation of ingredients produced by plant cell and tissue culture, (11)72
Separation Processes in the Food and Biotechnology Industries: Principles and Applications (br), (10)104
USDA's biotech approach needs revision, (11)124
Biotechnology Division
important developments in next 5 yr, (12)49
book reviews
(3)108; (4)114; (5)177; (6)111; (7)141; (9)102; (10)104; (11)104; (12)83
bread
Flat Bread Technology (br), (3)108
business/marketing
C-store: a sleeping giant, (10)28
Jack Sprat revisited–Fat and the American consumer, (1)28; formulating long-term growth, (2)20; the changing role of fast foods, (3)24; micro vs mass marketing: a trend to watch,(4)24; U.S. market: more stir fry than melting pot, (5)26; why drug firms are eyeing food aisles, (6)30; in search of the WOW factor, (7)26; grazing for energy: snack bars power up a new market, (9)30; steering a new course for beef, (10)30; rediscovering glass, (11)26; web mania: grocers go on-line, (12)22
mainstreaming healthy foods, (3)55

C

calcium
thumbs up for, (10)103
Carbohydrate Division
Important developments in next 5 yr, (12)49
carbohydrate(s)
Influence on food flavor, (1)63
carbon dioxide
extending dairy product shelf life with, (12)72
career guidance
education materials offered to high school teachers, (11)99
cereal
nutritional quality of, (5)62
cheese
Cheese and Fermented Milk Foods (2 vol)(br), (9)102
Kaese aus Schaf- und Ziegenmilch (Making Cheese from Sheep and Goat Milk) (br), (4)114
chemistry
food flavor interactions, (1)75; influence of lipids, (1)60; carbohydrates, (1)63; proteins, (1)68; food packaging, (1)71
Classified Guide, 1998
to food industry services: (1) classification; (2) description, (12)87
coatings
edible films solve problems, (2)60
for food products: use of lipids, (6)56
Codex Alimentarius
standards adopted during 22nd session of Codex Alimentarius Commission, (9)28
coffee *(see also* **patents)**
flavors: new products at Food Expo '97, (4)51
colloids
Advances in Food Colloids (br), (4)114
coming events
IFT continuing education programs: (1)42; (2)40; (3)49; (4)47; (5)53; (7)39; (8)43; (9)41; (10)38; (11)32; (12)27
meetings and conferenes: (1)42; (2)37; (3)45; (4)42; (5)46; (6)34; (7)30; (8)34; (9)34; (10)37; (11)30; (12)26
short courses and workshops: (1)44; (2)38; (3)47; (4)46; (5)49; (6)39; (7)37; (8)38; (9)37; (10)40; (11)34; (12)30
computers
Computerized Control Systems in Food Industry (br), (6)112
web mania: grocers go on-line, (12)22
confections
ingredients developments for, (9)70
new products at Food Expo '97, (4)56
consumer product trends
fats and oils slip and slide, (1)30; about to go nuts, (2)18; how sweet it is, (3)26; the big chill, (4)26; get a life...(5)28; the not-so-healthy market, (6)32; grain: all it's cracked up to be, (7)24; all in good taste, (8)28; what's cooking? (9)32; C-store–a sleeping giant, (10)28; sweetening the pot, (12)29
containers
rediscovering glass, (11)26
corn
tour highlights sweet uses of, (10)90
corrections
"GRAS flavoring substances 17," (2)32; (3)33; (5)35
cottonseed oil
trends in transesterification, (5)72
C-stores (convenience stores)
a sleeping giant, (10)28
curing
residual nitrite in meat, (2)53
Cyclospora cayetanensis
new foodborne pathogen, (1)120

D

diabetes
diet, genetics, and, (3)77
dairy products
extending shelf life with CO_2, (12)72
Microbiology and Biochemistry of Cheese and Fermented Milk (br), (12)83
Dairy Products Division
important developments in next 5 yr, (12)49
deaths *(see also* **in memoriam)**
Boyd, G.D., Meek, D.C., (2)84; Campos, J., Leahy, D.P., Zutic, R.F., (3)107; Jorysch, D., Maceiven, N.H., Malkin, I.E., Sabine, D.B., Souder, P.W., (6)16; Cantor, S.M., Kaufman, C.W., Toll, J.D., (7)16; Fordham, J.R., Tarr, H.L.A., (8)18; Ruffley, J. Jr., Webb, B.H., (9)20; Bogart, E.W., Cathcart, W.H., Katzenstein, A.W., Pischke, L.D., Skala, J.H., Stribley, P.C., (11)16; Claque, J.A., Fobes, A.W., Wood, H.J., (12)12
dehydration
advances in, (10)95
Dehydration of Foods (br), (10)104
dielectric heating
interest in it heats up, (11)94
diet *(see also* **nutrition; public health)**
and gene interactions, (3)66
Food Choice Acceptance and Consumption (br) (6)111
genetics and diabetes, (3)77; lactose intolerance, (3)74; obesity, (3)70
incorporating genetics into dietary guidance, (3)80
disease
foodborne: disease significance (Scientific Status Summary), (10)69; virus transmission via food (Scientific Status Summary), (4)71
chronic risk: impact of diet and genetic interactions on: Overview (5 papers), (3)65
disinfectants
ozone: use for food processing, (6)72
distribution, food
of chilled foods needs improvement, (10)120
drying *(see* **dehydration)**

E

education
coordinated approach to food safety education needed, (7)160
food chemistry: progress of, (7)45
news: (1)38; (2)28; (4)32; (5)38; (6)110; (7)138; (8)138; (9)96; (11)102; (12)80
Education Division
important developments in next 5 yr,

(12)50
electroacidification
of soybean protein for production of isolate, (9)52
electronic nose
application in food industry, (12)44
emulsions, food
Food Emulsions (br), (12)84
epidemiology
of foodborne viruses, (4)71
equipment
French companies to exhibit in U.S., (9)68
***Escherichia coli* O157:H7**
foodborne disease significance (Scientific Status Summary), (10)69
harbinger of change in food safety, (10)26
thumbs down for, (10)103
under media microscope, (11)104
ethnic foods
halal certification standards published, (8)134
kosher certification a marketing plus, (4)67
European report
European technology fairs introduce surprising innovations, (2)21
European Union
Food Law and European Union (br), (12)87
Extension Division
Important developments in next 5 yr, (12)50
extrusion
challenges in, (9)87
lab-scale extruder doubles speed, (9)85

F

fat replacers
for bakery products, (1)83; dairy, (1)84; meat, (1)84; dressings & sauces, (1)86; other products, (1)87; general applications, (1)87
fats and oils
and the American consumer, (1)28
low-calorie pose labeling problems, (8)94
new products at Food Expo '97, (4)65
slip and slide–consumer product trends, (1)30
vitamin E content of: nutrition implications, (5)78
where do we go from here? (1)26
films
edible: solve problems, (2)60
packaging: technology produces tougher, brighter, more protective flexible, (10)92
polymer: edible and biodegradable, (2)16
flavor *(see also* **patents)**
chemistry of interactions: influence of lipids, (1)60; carbohydrates, (1)63; proteins, (1)68; food packaging, (1)71; interactions, (1)75
coffee/tea–new products at Food Expo '97, (4)50
ethnic–new products at Food Expo '97, (4)50
influence of packaging on, (1)71
limitations of sensory evaluation in detecting off-flavor in seafood, (8)70
salty developments in food, (10)79
food chemistry
future directions, (7)42
Food Chemistry Division
division lecture highlights, (8)86
important developments in next 5 yr, (12)50
food engineering
aseptic process validated for foods containing particulates, (8)60
challenges in extrusion, (9)87
Computerized Control Systems in Food Industry (br), (6)112
engineering strategies offer R&D opportunities, (8)88
interest in radiofrequency heating heats up, (11)94
packaging research emphasizes safety, interactions, (7)115
processing equipment exhibited at IFT Food Expo, (7)110
reactor design for plant cell culture of food, (11)62
Rheological Methods in Food Process Engineering, 2nd ed. (br), (10)104
Food Engineering Division
important developments in next 5 yr, (12)50
Food Expo '97
exhibitors, in print: reviews exhibitors with products/services offered: alphabetical order, (5)138; products/services, (7)53
food industry services exhibited, (7)117
ingredients exhibited at , (7)53
lab equipment at, (7)101
packaging exhibited, (7)115
processing equipment exhibited, (7)110
what's hot at, (4)50: flavors, (4)50; specialty grains, (4)54; confectionery ingredients, (4)56; nutraceutical ingredients, (4)62; healthful fats and oils, (4)65; kosher certification, (4)67
food, functional
ethical marketing of, (12)58
food history
American Food Habits in Historical Perspective (br), (4)114
biotechnology coverage by *FT* over the years, (4)68
50 years–important developments by 50-yr IFT members, (9)62
Food Technology contributing to advances in food science & technology for 50 yr, (1)8
irradiation coverage by *FT* over the years, (2)49
microwaves: how *FT* covered over the years, (5)82
space feeding coverage by *FT* over the years, (3)52
food industry
application of electronic nose in, (12)44
Computerized Control Systems in Food Industry (br), (6)112
electroacidification of soybean for production of isolate, (9)52
ethical marketing of functional foods, (12)58
global food marketing–bigger is better, (1)53
labs serving: what's ahead, (3)60
managing teams in, (11)75
1998 Classified Guide to Services: (1) classification of services; (2) description of services, (12)87
SeparationProcesses in the Food and Biotechnology Industries: Principles and Applications (br), (10)104
services: basic research in testing, interactions, and measuring come from service groups, (7)117; exhibited at IFT Food Expo, (7)117
technical centers facilitate food product development, (6)50
Food Laws & Regulations Division
important developments in next 5 yr, (12)50
Food Microbiology Division
lecture highlights, (8)86
important developments in next 5 yr, (12)52
food packaging
edible and biodegradable polymer films: challenges and opportunities, (2)16
influence on food flavor, (1)71
research emphasizes safety, interactions, (7)115
Food Packaging Division
important developments in next 5 yr, (12)52
food preservation/processing
aseptic: continuous multiphase, of foods, (10)43
aseptic processing validated for foods, (8)60
challenges and opportunities for metab-

olite production from plant cell and tissue cultures, (11)47
containing particulates, (8)60
extending dairy product shelf life with CO_2
food chemistry: future directions, (7)42
Fruit Processing (br), (9)102
high-pressure processing reaches U.S. market, (6)95
minimally processed fruits and vegetables: reducing microbial load by nonthermal packaging treatment, (6)66
New Methods of Food Preservation (br), (9)102
1996 DuPont awards competition honors innovations in, (1)95
plant tissue culture for production of secondary metabolites, (11)56
Processing Fruits: Science & technology: Vol. 1: Biology, Principles & Applications; Vol. 2: Major Processed Products (br), (9)103
reactor design for plant cell culture of food, (11)62
translating technical developments in, into new products, (7)108
use of ozone for, (6)72
food research
applying quality enhancement concepts in frozen food development, (2)56
assessing, managing and communicating chemical food risks (Scientific Status Summary), (5)85
biosynthesis and stability of monoacylated anthocyanins, (11)68
cellular research defines bioactive components in milk, (8)91
challenges and opportunities for metabolite production from plant cell and tissue cultures, (11)47
edible and biodegradable polymer films (Scientific Status Summary), (2)61
establishing tolerable upper limits for nutrient intakes, (8)164
evaluating syrups using extensional viscosity, (1)49
flavor: influence of lipids, (1)60; carbohydrats, (1)63; proteins, (1)68; packaging, (1)71; interactions, (1)75
foodborne disease significance of *E. coli O157:H7* and other enterohemorrhagic *E. coli, (10)69*
food chemistry: future directions, (7)42
labs serving food industry: what's ahead, (3)60
Managing Scientists: Leadership Strategies in R&D (br), (5)177
managing teams in food industry, (11)75
microbial database building: what have we learned, (4)82
monoglycerides in food systems: uses, (8)52
packaging research emphasizes safety, interactions, (7)115
plant tissue culture for production of secondary metabolites, (11)56
predictive food microbiology: where do we go from here? (Overview, 5 papers), (4)81

shaping future of IFT, (8)8
processing *(see also food* **preservation/processing)**
advances in drying, (10)95
challenges in extrusion, (9)87
halal certification standards published, (8)134
high-pressure processing reaches the U.S. markets, (6)95
interest in radiofrequency heating heats up, (11)94
patents: (6)97; (7)134; (8)135; (9)88; (10)96; (11)97; (12)73
products & literature, (7)133
translating technical developments in processing into new products, (7)108
triple-pass immersion freezer eliminates need for separate mechanical freezer, (7)133
product development
IFT hosts seminar in Japan, (11)80
managing teams in food industry, (11)75
technical centers facilitate, (6)50
Product Development Division
important developments in next 5 yr, (12)53
product update
ingredients that add texture: toppings, inclusions, coatings, thickeners, stabilizers, other, (2)75
ingredients for meatless products, (3)94
proteins
influence on food flavor, (1)68
molecular strategies to improve quality of legumes, (5)67
soybean composition and tofu quality, (3)86
storage and hard-to-cook phenomenon in legume seeds, (5)58
storage, nutritional quality of, (5)62

Q

quality assurance
application of electronic noses in food industry, (12)44
applying concepts in frozen food development, (2)56
QA/QC developments: stalking the juice thieves, (4)28
Quality Assurance Division
important developments in next 5 yr, (12)53

R

Refrigerated & Frozen Foods Division
important developments in next 5 yr, (12)53
regulations *(see* **laws/regulations)**
rheology
evaluating syrups using extensional viscosity, (1)49
measuring yield stress of fluid foods, (2)50
of weak gels used to improve fluid foods, (3)83
Rheology of Industrial Polysaccharides: Theory and Application (br), (3)108
Rheological Methods in Food Process Engineering, 2nd ed. (br), (10)104
risk assessment
assessing, managing and communicating chemical food risks, (5)85

S

salt
interview with an expert, (10)81
salty developments in food, (10)79
science communications
biotechnology meets city politics, (1)23; edible and biodegradable polymer films: challenges & opportunities, (2)16; warning: this food has been genetically engineered, (3)20; understanding and preventing virus transmission via foods, (4)20; chemical risks in foods: an editorial viewpoint, (5)22; government activities jump to lightspeed, (6)28; informing the public about dietary supplements, (7)28; what do I do all day? My life as a Hill staffer, (8)26; Codex, International trade and science, (9)28; *E. coli* O157:H7, harbinger of change in food safety and tradition in industrialized world, (10)26; IFT's government activities: update, (11)24; uncowed by *E. coli*, (12)18
Scientific Status Summary
assessing, managing and communicating chemical food risks, (5)85
edible and biodegradable polymer films: challenges and opportunities, (2)61
foodborne disease significance of *E. coli* O157:H7 and other enterohemorrhagic *E. coli*, (10)69
virus transmission via food, (4)71
seafood
detecting off-flavors: limitations of sensory evaluation, (8)70
Seafood Technology Division
lecture highlights, (8)86
important developments in next 5 yr, (12)54
sensory evaluation
chemistry of flavor interactions: influence of lipids, (1)60; carbohydrates, (1)63; proteins, (1)68; packaging, (1)71; interactions, (1)75
electronic noses and their applications in the food industry, (12)44
evaluating syrups using extensional viscosity, (1)49
limitations of, in detecting seafood off-flavors, (8)70
Sensory Evaluation Division
important developments in next 5 yr, (12)54
societies and associations
elections and appointments: (2)82; (3)106; (4)113; (5)176; (6)27; (7)19; (8)21; (9)22; (10)25; (11)22; (12)17
news: (1)98; (2)82; (3)106; (4)112; (5)176; (6)22; (7)18; (8)20; (9)22; (10)22; (11)20; (12)14;
sous vide
chilled foods distribution needs improvement, (10)120
LAB to improve safety of fruits and vegetables, (9)44
minimally processed fruits & vegetables: reducing microbial load by nonthermal physical treatments, (6)66
soybean
electroacidification of proteins for production of isolate, (9)52
protein composition and tofu quality, (3)86
Soybeans: Chemistry, Technology and Utilization (br), (12)83
space feeding
how *Food Technology* covered over the years, (3)52
Stillings, B.R.
IFT president-elect for 1997-98, (7)135
strawberries
hepatitis A from: who's to blame, (6)132
supermarket
new packaging for take-out, (11)97
syrup(s)
evaluating using extensional viscosity, (1)49

T

tannins
food tannins and human health: a double-edged sword? (9)124; article draws responses, (12)168
tea
flavors–new products at Food Expo '97, (4)51
technology trends
food safety–improvements in product development, (6)46; salmonella in eggs or bacteria in fruit juices, new methods, (6)47
tests & testing *(see* **analytical methods)**
texture
ingredients that add: inclusions, toppings, coatings, thickeners, stabilizers, other, (11)82
tofu
soybean protein composition and tofu quality, (3)86
toxicology *(also see* **food safety)**
developing a new food wholesomeness science to ensure food safety, (12)2
Toxicology & Safety Evaluation Division
important developments in next 5 yr, (12)54
transesterification
of cottonseed oil: trends, (5)72

V

vegetables *(see also* **fruits & vegetables;** ***sous vide)***
minimally processed: reducing microbial load by nonthermal physical treatments, (6)66
viruses
epidemiology of, (4)71
transmission via food (Scientific Status Summary), (4)71
viscosity, extensional
evaluating syrups using, (1)49
vitamins
vitamin A fortification: letters, (2)29
vitamin E in fats and oils–nutritional implications, (5)78

W

Wagner, M.K.
Becomes IFT's 1997-1998 president, (7)135
water activity
new critical measurement, (10)94
water binding
changing role of, (10)64
wine
Wine Microbiology (br), (11)106
world food prize
call for 1998 nominations, (10)100
Smith & Adkisson recipients for work on integrated pest management (IPM), (12)56 ●

Book Review Index *continued from p. 86*

■ **Fermentation** (see Biotechnology)

■ **Fish** (see Muscle Foods)

■ **Flavors** (see Additives)

■ **Food Safety** (see Toxicology)

■ **Foodservice & Cookbooks**
No reviews in this category.

■ **Fragrances** (see Additives)

■ **Frozen Foods** (see Refrigerated & Frozen Foods)

■ **Fruits, Vegetables, & Legumes**
Food and Feed From Legumes and Oilseeds. E. Nwokolo and J. Smartt. (6) 111
Fruit Processing. D. Arthey and P.R. Ashurst, eds. (9) 102
Processing Fruits: Science and Technology. Vol. I: Biology, Principles, and Applications. L.P. Somogyi, H.S. Ramaswamy, and Y.H. Hui, eds. (9) 103
Soybeans: Chemistry, Technology, and Utilization. KeShun Liu. (12) 83

■ **Genetic Engineering** (see Biotechnology)

■ **Handbooks** (see Reference Books)

■ **Health** (see Nutrition)

■ **Horticulture** (see Agriculture)

■ **Hydroponics** (see Agriculture)

■ **Information Retrieval** (see Computers)

■ **Ingredients** (see Additives)

■ **Instrumentation** (see Analysis)

■ **Laboratory Manuals** (see Textbooks)

■ **History**
American Food Habits in Historical Perspective. Elaine N. McIntosh. (4) 114

■ **Laws & Regulations**
Food Laws and Regulations. James L. Vetter. (7) 141
Food Law in the European Union. (12) 84

■ **Legumes** (see Fruits)

■ **Lipids** (see Oils)

■ **Management**
Managing Scientists: Leadership Strategies in Research and Development. Alice M. Sapienza. (5) 177

■ **Marketing**
Food Choice Acceptance and Consumption. H.L. Meiselman and H.J.H. MacFie, eds. (6) 111

■ **Meat** (see Muscle Foods)

■ **Microbiology**
Flat Bread Technology. Jalal Qarooni. (3) 108
Modern Food Microbiology, 5th ed. James M. Jay. (6) 112
Processing Fruits: Science and Technology. Vol. I: Biology, Principles, and Applications. L.P. Somogyi, H.S. Ramaswamy, and Y.H. Hui, eds. (9) 103
Wine Microbiology. Kenneth C. Fugelsang. (11) 106
Microbiology and Biochemistry of Cheese and Fermented Milk, 2nd ed. B.A. Law, ed. (12) 83
Microorganisms in Foods 5: Microbiological Specifications of Food Pathogens. ICMSF. (12) 84

■ **Muscle Foods,** including meat, fish, seafood, shellfish, & poultry
Processed Meats, 3rd ed. A.M. Pearson and T.A. Gillett. (3) 108

■ **Nutrients** (see Additives)

■ **Nutrition, Diet & Health**
American Food Habits in Historical Perspective. Elaine N. McIntosh. (4) 114
Food Lipids and Health (IFT Basic Symposium Series). Richard E. McDonald and David B. Min. (5) 177
Food Choice Acceptance and Consumption. H.L. Meiselman and H.J.H. MacFie, eds. (6) 111
Food and Feed From Legumes and Oilseeds. E. Nwokolo and J. Smartt. (6) 111
Dictionary of Nutrition. Claus Leitzmann and Ulrike Dauer. (7) 141
Present Knowledge in Nutrition, 7th ed. Ekhard E. Ziegler and L.J. Filer Jr., eds. (11) 105
Soybeans: Chemistry, Technology, and Utilization. KeShun Liu. (12) 83

■ **Oils, Fats & Lipids**
Advances in Food Colloids. Eric Dickinson and D. Julian McClements. (4) 114
Food Lipids and Health (IFT Basic Symposium Series). Richard E. McDonald and David B. Min. (5) 177
Food and Feed From Legumes and Oilseeds. E. Nwokolo and J. Smartt. (6) 111
Soybeans: Chemistry, Technology, and Utilization. KeShun Liu. (12) 83
Food Emulsions, 3rd ed. Stig E. Fribert and Kare Larsson, eds. (12) 84

■ **Packaging**
Processing Fruits: Science and Technology. Vol. I: Biology, Principles, and Applications. L.P. Somogyi, H.S. Ramaswamy, and Y.H. Hui, eds. (9) 103
Active Food Packaging. M.L. Rooney, ed. (11) 106

■ **Physical Chemistry of Foods** (see Chemistry)

■ **Physical Properties of Food**
Rheology of Industrial Polysaccharides: Theory and Applications. R. Lapasin and S. Pricl. (3) 108
Advances in Food Colloids. Eric Dickinson and D. Julian McClements. (4) 114
Rheological Methods in Food Process Engineering, 2nd ed. James F. Steffe. (10) 104
Food Emulsions, 3rd ed. Stig E. Fribert and Kare Larsson, eds. (12) 84

■ **Pollution Control** (see Engineering)

■ **Popular Books on Food Science & Technology**
No reviews in this category.

■ **Postharvest Technology**
Processing Fruits: Science and Technology. Vol. I: Biology, Principles, and Applications. L.P. Somogyi, H.S. Ramaswamy, and Y.H. Hui, eds. (9) 103

■ **Poultry** (see Muscle Foods)

■ **Preservation**
Processed Meats, 3rd ed. A.M. Pearson and T.A. Gillett. (3) 108
Fruit Processing. D. Arthey and P.R. Ashurst, eds. (9) 102
New Methods of Food Preservation. G.W. Gould, ed. (9) 102
Processing Fruits: Science and Technology. Vol. I: Biology, Principles, and Applications. L.P. Somogyi, H.S. Ramaswamy, and Y.H. Hui, eds. (9) 103
Dehydration of Foods. Gustavo V. Barbosa-Cánovas and Humberto Vega-Mercado. (10) 104
Separation Processes in the Food and Biotechnology Industries: Principles and Applications. A.S. Grandison and M.J. Lewis, eds. (10) 104
Wine Microbiology. Kenneth C. Fugelsang. (11) 106

■ **Process Control**
Processed Meats, 3rd ed. A.M. Pearson and T.A. Gillett. (3) 108
Computerized Control Systems in the Food Industry. Gauri S. Mittal, ed. (6) 112
Processing Fruits: Science and Technology. Vol. I: Biology, Principles, and Applications. L.P. Somogyi, H.S. Ramaswamy, and Y.H. Hui, eds. (9) 103

■ **Processing** (see Engineering)

■ **Product Development**
Processed Meats, 3rd ed. A.M. Pearson and T.A. Gillett. (3) 108
Managing Scientists: Leadership Strategies in Research and Development. Alice M. Sapienza. (5) 177
Food Emulsions, 3rd ed. Stig E. Fribert and Kare Larsson, eds. (12) 84

■ **Proteins**
Advances in Food Colloids. Eric Dickinson and D. Julian McClements. (4) 114
Soybeans: Chemistry, Technology, and Utilization. KeShun Liu. (12) 83

■ **Quality Assurance & Sanitation** (including HACCP)
No reviews in this category.

■ **Reference Books**, including dictionaries, encyclopedias, directories, bibliographies, and handbooks
Food Laws and Regulations. James L. Vetter. (7) 141
Dictionary of Nutrition. Claus Leitzmann and Ulrike Dauer. (7) 141
Present Knowledge in Nutrition, 7th ed. Ekhard E. Ziegler and L.J. Filer Jr., eds. (11) 105
Food Law in the European Union. (12) 84

■ **Refrigerated & Frozen Foods**
No reviews in this category.

■ **Rheology** (see Physical Properties)

■ **Sanitation** (see Quality Assurance)

■ **Seafood** (see Muscle Foods)

■ **Sensory Evaluation**
Food Choice Acceptance and Consumption. H.L. Meiselman and H.J.H. MacFie, eds. (6) 111

■ **Shellfish** (see Muscle Foods)

■ **Statistics & Experimental Design**
No reviews in this category.

■ **Textbooks & Laboratory Manuals**
Rheology of Industrial Polysaccharides: Theory and Applications. R. Lapasin and S. Pricl. (3) 108
Food Laws and Regulations. James L. Vetter. (7) 141

■ **Texture** (see Physical Properties)

■ **Toxicology & Food Safety**
Food and Feed From Legumes and Oilseeds. E. Nwokolo and J. Smartt. (6) 111
Microorganisms in Foods 5: Microbiological Specifications of Food Pathogens. ICMSF. (12) 84

■ **Unclassified**
No reviews in this category.

■ **Vegetables** (see Fruits)

■ **Water Activity** (see Microbiology)

■ **World Food Problems**
